```
Java
class Solution {
   public int countPrimes(int n) {
JavaScript
/**
* @param {number} n
* @return {number}
var countPrimes = function(n) {
};
TypeScript
function countPrimes(n: number): number {
};
C++
class Solution {
public:
```

```
int countPrimes(int n) {
    }
};

C#

public class Solution {
    public int CountPrimes(int n) {
    }
}
```
